01 · WHO I AM

A reliable technical partner for your business

I am a Software Engineer and designer with 5+ years of experience delivering secure, scalable software for a US commercial software publisher and technology firms in SaaS, hospitality and real estate. For you, that means one dependable specialist who takes a requirement from idea to finished product — a refreshed brand identity, a clinic booking system, an AI WhatsApp assistant or an operations dashboard — with clear communication, fixed milestones and well-documented delivery.

What I deliver

- Web apps, portals and admin dashboards
- Brand identity, UI/UX and marketing design
- AI chatbots and WhatsApp automation
- Desktop and cross-platform software
- APIs, integrations, payments and cloud

Sectors I support

- **Healthcare** — clinics, diagnostic and wellness centres
- **Oil & Gas** — inspection, maintenance, field operations
- **Marine** — vessel, crew, compliance and asset tracking
- **Also:** SaaS, retail, education, real estate

What I can build for you

Every engagement is scoped around a business outcome — fewer missed appointments, faster reporting, less manual work — not just a list of features.

01 Custom Web Apps & Portals

Secure, responsive systems your customers and staff use every day.

- Customer / patient portals and booking systems
- CRM, records and document management
- Role-based access, login and audit trails

02 Dashboards, Reporting & Analytics

Turn scattered data into decisions at a glance.

- KPI dashboards with live charts
- Automated PDF / Excel reports
- Multi-location and multi-department views

03 AI Chatbots & WhatsApp Automation

Answer customers instantly, 24/7, with a human handoff when needed.

- WhatsApp Business API (Meta Cloud / Twilio)
- AI FAQ assistants trained on your content
- Reminders, confirmations and follow-ups

04 Desktop & Cross-Platform Software

Professional apps for Windows, Mac, Linux and Chromebook.

- Electron, .NET / WPF and C++ applications
- Offline-capable tools with cloud sync
- App Store packaging, signing and release

05 APIs, Integrations & Payments

Connect the tools a business already relies on.

- REST APIs, webhooks and third-party integrations
- Braintree, PayPal and WooCommerce billing
- Subscriptions, licensing and renewals

06 Cloud, Data Pipelines & DevOps

Reliable infrastructure that scales without surprises.

- Google Cloud and Microsoft Azure
- Serverless jobs, BigQuery and scheduled tasks
- Docker, CI/CD and production deployment

07 UI/UX Design & Training Content

Interfaces people understand, and content that teaches.

- Figma wireframes, prototypes and design systems
- AI-assisted training and explainer videos
- Brand visuals and marketing graphics

08 Support, Maintenance & Bug Fixing

Keep existing systems fast, secure and up to date.

- Bug fixing and performance optimisation
- Feature upgrades on legacy code
- Data migration, entry and clean-up

Solutions for healthcare centres

Clinics and diagnostic centres lose time and revenue to missed appointments, phone queues and manual paperwork. These are the solutions I build to fix that — each can be delivered on its own or combined into one platform.

Healthcare solutions I offer

- **Online appointment booking** with doctor calendars, walk-in queues and automatic reminders by WhatsApp, SMS or email to reduce no-shows.
- **AI WhatsApp patient assistant** that answers opening hours, pricing, test preparation and location questions instantly, and hands sensitive cases to staff.
- **Patient portal & records system** for registration, visit history, prescriptions, lab reports and document uploads.
- **Clinic management dashboard** showing daily visits, revenue, doctor utilisation and no-show rates across one or many branches.
- **Billing, packages & memberships** with online payments, invoices and recurring health-plan subscriptions.
- **Staff & patient training videos** and onboarding material produced with AI avatars, voice-over and subtitles.
- **Data migration & digitisation** of paper files and spreadsheets into a clean, searchable database.

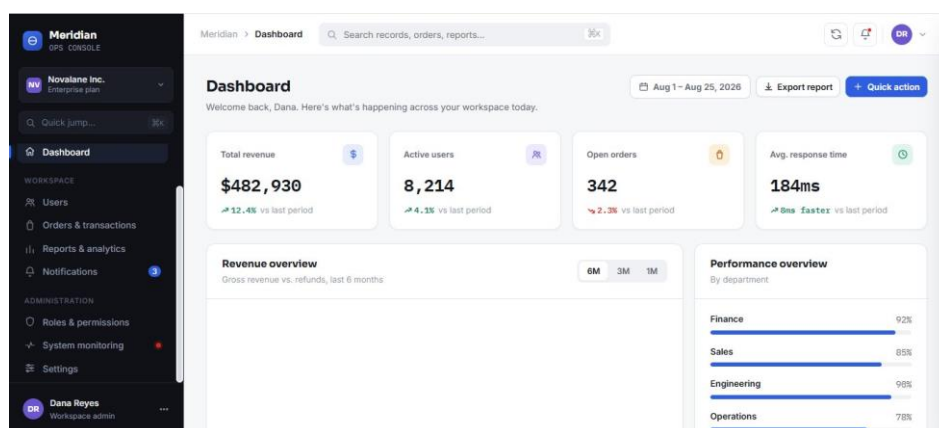

My AI WhatsApp automation flow — instant replies, human handoff and conversation logging. Directly applicable to clinic front desks.

Built with patient data in mind

Role-based permissions, encrypted connections (HTTPS / JWT), audit logs, regular backups and hosting in your preferred region. Systems are designed to support the data-protection requirements your organisation operates under (for example HIPAA, GDPR or LGPD), and I follow your compliance guidance on every project.

Relevant proof: I build and maintain secure, JWT-protected portals that handle 352,000+ customer records and a CRM used daily by sales and support teams — the same foundations a patient-records system needs.

Enterprise admin console I designed in Figma — a ready foundation for a multi-branch clinic dashboard.

Solutions for oil, gas & marine operations

Industrial and maritime teams need accurate field data, strict safety compliance and fast reporting. I combine engineering-software experience with web, cloud and training-content skills to support them.

Industrial & marine solutions I offer

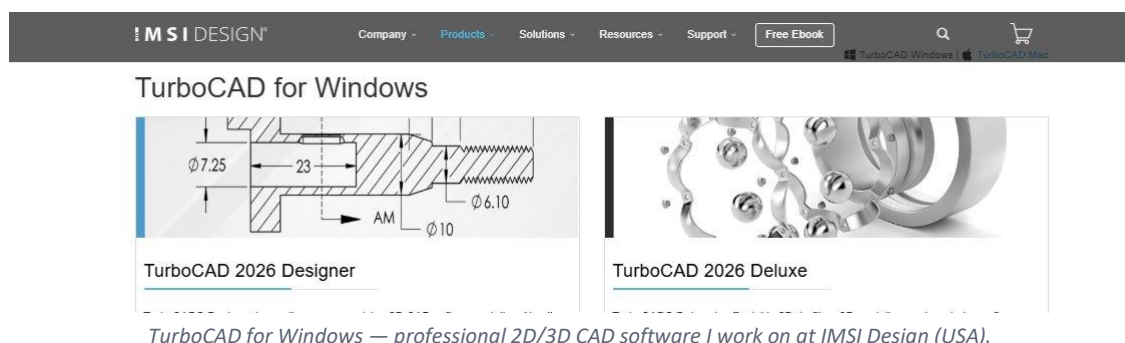

- **Inspection & maintenance apps** to record readings, photos and defects in the field, with pass / monitor / action status and scheduled follow-ups.
- **Asset, vessel & fleet dashboards** tracking equipment condition, certificates, dry-dock and maintenance schedules.
- **Automated inspection reports** exported to PDF / Excel against the standards your team follows.
- **Safety & technical training videos** and e-learning modules for crews and field technicians.
- **Crew, permit & document management** with expiry alerts for licences, permits and certifications.
- **Sensor & operational data pipelines** into the cloud (BigQuery, Azure) for live monitoring and trend analysis.
- **CAD & engineering software support** including desktop tools, licensing and technical drawing workflows.

Sample industrial NDT training module I produced: ultrasonic wall-thickness measurement on pipes and vessels, safety checklists and an ASME B31.3 inspection report — AI instructor, voice-over and subtitles.

Engineering-grade experience

Since 2021 I have developed and maintained **TurboCAD**, a professional 2D/3D CAD suite used by engineers and designers for technical drafting, 3D modelling and rendering — including its C++ licensing SDK, floating (multi-seat) licences and in-app subscription renewals. I understand technical users, precise data and software that must work in demanding environments.

A simple, transparent process

01

Discover

Short call or chat to understand goals, users and budget. You receive a clear scope and quote.

02

Design

Wireframes or a clickable prototype so you approve the look and flow before coding.

03

Build

Development in milestones with regular progress updates and demo links you can share.

04

Launch & Support

Testing, deployment, handover documentation and ongoing maintenance options.

What you can count on

Delivery

- **Proven at scale** — production systems handling millions of records for a US software company.
- **End-to-end ownership** — from design and database to deployment; no hand-offs between multiple vendors.
- **Security first** — authentication, permissions and payment flows built correctly from day one.

Partnership

- **Clear communication** — weekly updates; experienced reporting directly to a CEO and stakeholders.
- **Low-defect delivery** — clean, maintainable work, tested before every release.
- **Long-term partner** — available for ongoing support, repeat projects and white-label work.

Tools & technologies

Front-end	React.js, Next.js, TypeScript, Redux, Vue.js, Material UI, HTML5 / CSS3 / SASS, Chart.js, amCharts
Back-end	Node.js, Express, C# / ASP.NET Core, Entity Framework, PHP / Laravel, Python, C++
Desktop	Electron.js, Electron.NET, WPF, Swift modules, Mac App Store release
Databases	MS SQL Server, MySQL, MongoDB, SQLite, Firestore, BigQuery
Cloud & DevOps	Google Cloud (Functions, Run, Pub/Sub, Scheduler), Microsoft Azure, Docker, Nginx, GitHub Actions
Integrations & AI	WhatsApp Business API, Twilio, AI chat / FAQ engines, Braintree, PayPal, WooCommerce, JWT, Webhooks
Design & Tools	Adobe Illustrator, Adobe Photoshop, Figma, Git, Azure DevOps, JIRA, Postman, Unity WebGL
UI/UX	Wireframes, prototypes, design systems, responsive layouts, dashboards, desktop & mobile apps
Marketing	Social media kits, ad creatives, banners, product mockups, launch visuals

What I design for you

01

Corporate Identity & Branding

Logos and visual systems that stay recognisable everywhere.

- Logo design & variations
- Colour, typography & brand guidelines
- Brand refresh of existing identities

02

Company Profiles & Print

Documents that present a business with confidence.

- Company profiles & brochures
- Business cards & stationery
- Presentations & sales sheets

03

Multi-Platform UI/UX

Interfaces that feel native on every device.

- Web, desktop & mobile app screens
- Wireframes & clickable prototypes
- Design systems & component libraries

04

Website Design

Modern, responsive sites that convert visitors.

- Corporate & landing pages
- Product and service showcases
- Figma designs ready for development

05

Social Media & Marketing

On-brand content your team can reuse weekly.

- Post & story templates
- Ad creatives & banners
- Product mockups & launch visuals

06

Changes to Existing Image

Modernise a brand without losing recognition.

- Logo clean-up & redraw
- Updated palette, type & assets
- Roll-out across web, app & print

How I update an existing corporate image

1

Audit

Review the current logo, colours, fonts and materials; note what to keep and what feels dated.

2

Refine

Present 2–3 refreshed directions that keep brand recognition while looking current.

3

Systemise

Build a compact brand guide: logo rules, palette, typography, icons and templates.

4

Roll out

Apply the new look to the profile, stationery, social media, website and app screens.

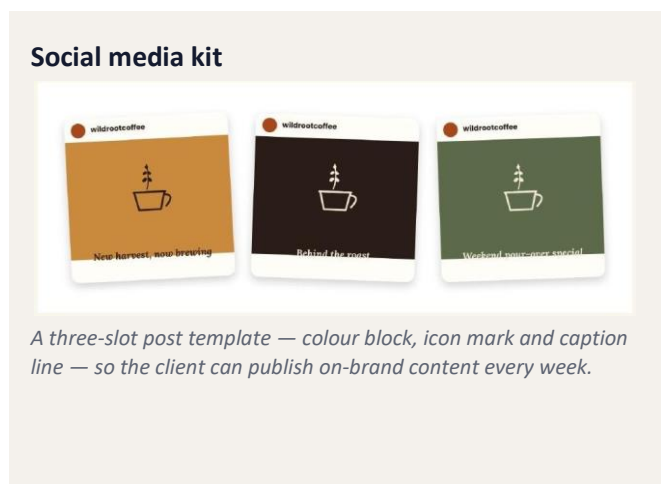

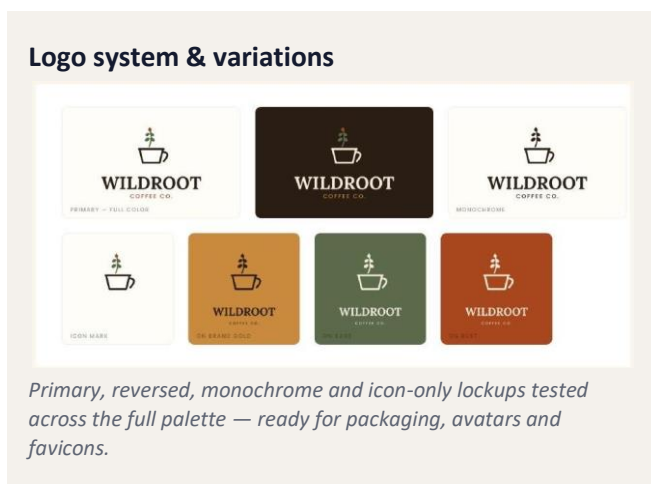

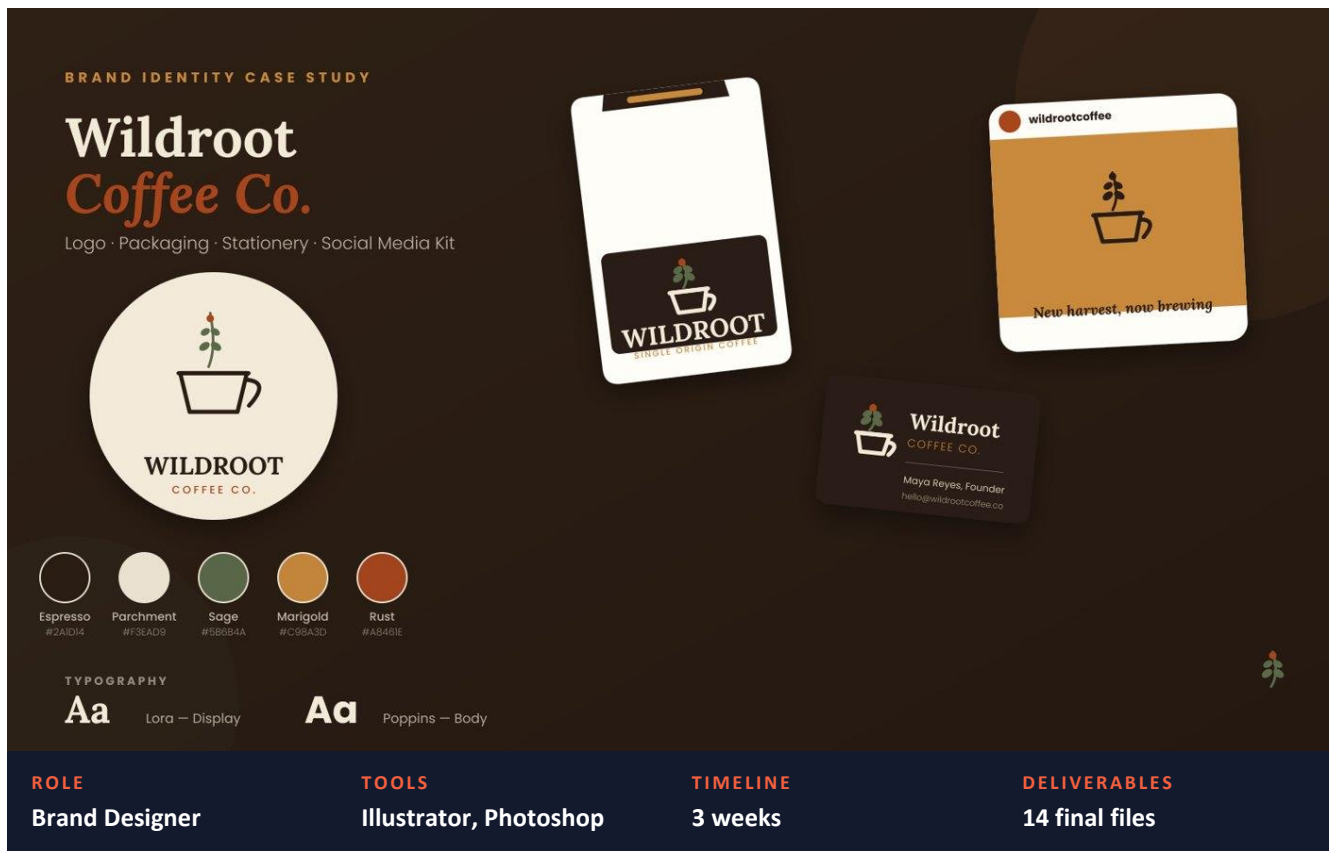

BRAND KIT DELIVERABLES

Everything a company needs to present one consistent image

- | | | | |
|--------------------|--------------------|-------------------|---------------------|
| ■ Logo suite | ■ Colour palette | ■ Typography | ■ Icon set |
| ■ Business cards | ■ Letterhead | ■ Company profile | ■ Presentation deck |
| ■ Social templates | ■ Web & app UI kit | ■ Email signature | ■ Brand guidelines |

Wildroot Coffee Co. — complete brand identity

Took an independent roastery from a placeholder wordmark to a complete, print-ready identity: logo system, packaging, business stationery and a social media kit built around a warm, hand-crafted palette.

“A brand that feels grown, not manufactured — from the packaging label down to the last Instagram post.”

DESIGN GOAL FOR WILDROOT

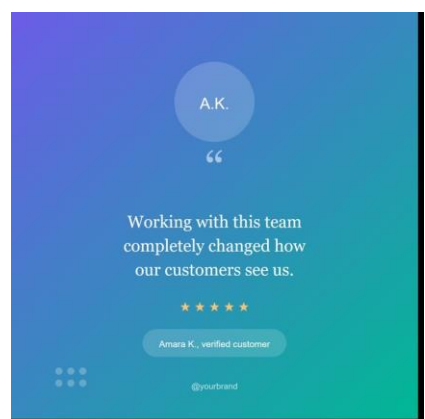

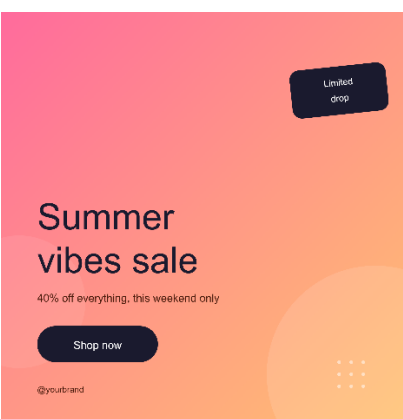

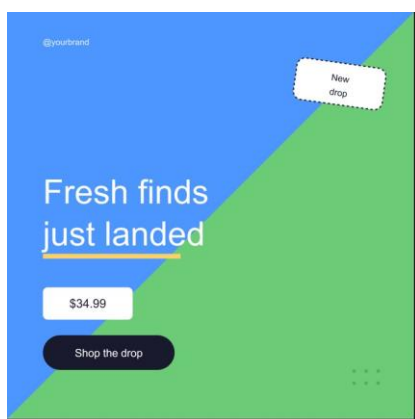

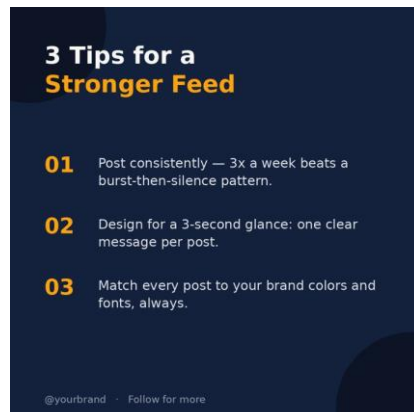

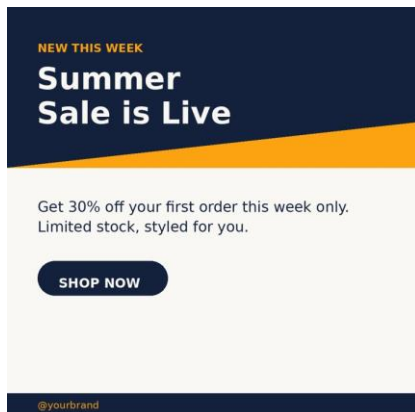

Consistent brand touchpoints

Business stationery and marketing content designed as a single system, so every piece you share looks unmistakably yours.

“Vantage Creative Studio” business card concept — front and back, print-ready with bleed. Elegant serif typography, a geometric monogram and gold accents on deep navy.

Social media & campaign designs

Promotional, educational, quote, product-launch and testimonial templates — built with editable text and brand colours so teams can reuse them.

Interfaces for web, desktop, tablet & mobile

Clean, task-focused screens designed around real workflows, with responsive layouts and reusable components that developers can build directly.

CASE STUDY

GearUp — automotive shop management, redesigned for the shop floor

A 12-page UX case study: repair orders, digital inspections, technician queue, scheduler, customer profiles, inventory and reporting — across desktop, tablet and phone.
